

Quick Set up Guide Android and Apple Platforms

The following guide will enable you to set up your thermostat quickly. Configuration is set through WiFi networks, one being your home network, the other programmed into the thermostat. Bluetooth is not used. Apple iOS is shown but is the same for Android set up and use.

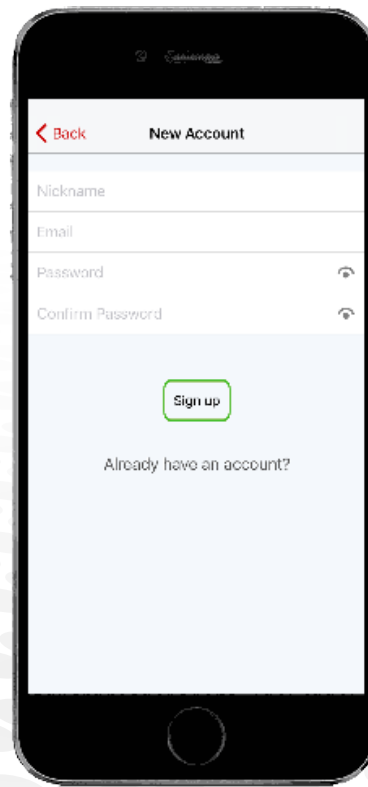

Add Device (RS10420T)

Step 1

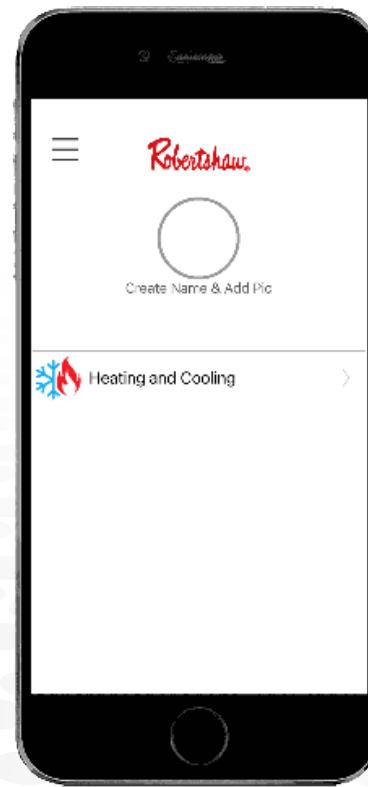

When launching the app the first time, tap **Create Account**.

Step 2

Complete the New Account fields. Tap **Sign up**.

Step 3

Enter your name and add your image.

Step 4

Tap **+ Add New Device** at the bottom.

Using Your Thermostat (RS10420T)

Step 9

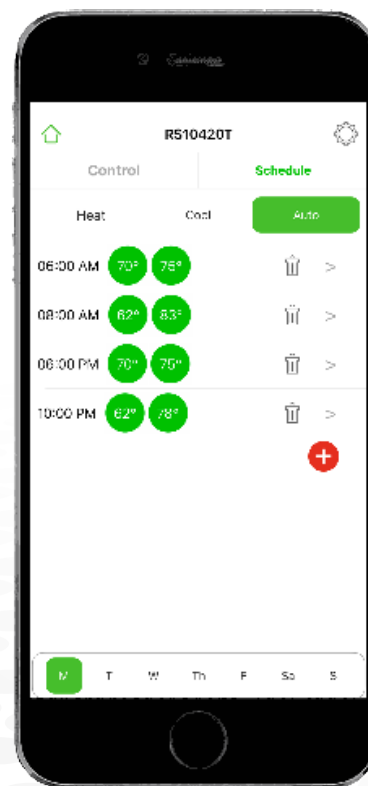

Tap **Schedule**, then **Heat**. Program wake, leave, return and sleep temperatures by the day.

Step 10

Tap **Cool** to program cooling daypart temperatures by the day.

Step 11

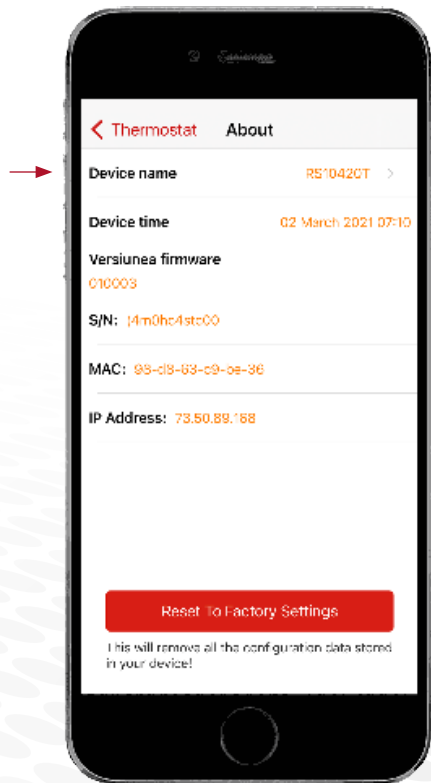

Tap **Auto** to program both heat and cool daypart temperatures by the day.

Quick Set up Guide Amazon & Alexa and Echo

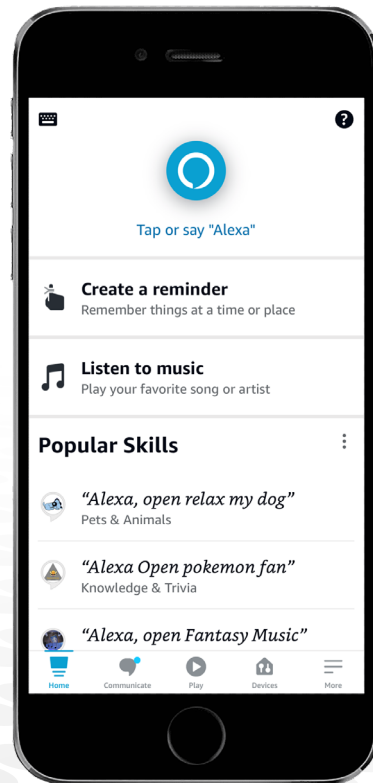

Adding Your Thermostat (RS10420T)

Step 1

In the Robertshaw app, edit your device name here. You must rename to connect to Amazon Alexa.

Step 2

Download Alexa App to your smartphone.

Step 3 - Syncing Thermostat to Alexa app

1. Go to your Alexa App and login
2. Click "More" at bottom right corner
3. Choose "Skills & Games" in the options bar
4. Type in Search "Robertshaw"
5. Press the "Robertshaw" option
6. In the search results click "Enable to Use". This will link your Robertshaw thermostat account
7. Enter your user name and password that you had previously registered with the "Robertshaw" app
8. When you see the connected page, it means the Alexa account is linked with the "Robertshaw" account
9. Alexa will now begin looking for devices to connect
10. You can now control your Robertshaw thermostat using your Alexa device
