Plug in Thermostat

Please read the instructions fully before attempting installation.

Key Features

- Three buttons for easy use.
- Simply adjust your required temperature by using + and - buttons.
- The display shows the room temperature.
- Temperature display in degrees Celsius.
- Non-programmable.

Operating Instructions

- Plug heating device into the unit and press power button.
- Desired temperature can be chosen by using the + and - buttons
- To switch off press the power button.
- Room temperature can be shown by long press on/off button under 'off mode'.

Calibration of the unit

The unit may need calibrating if the temperature shown is higher/lower than actual room temperature. Calibration is simple:

To do this you need to first ascertain what the correct temp is.

The example shown below is if the room is 19 degrees and the unit is reading 17 you need to add 2 degrees onto it.

You will need to amend to your specific needs

To calibrate:
1. Place in plug and switch the plug socket on
2. Press the + and - together, this will then enter calibrate mode, press the + button twice (the number will go up by 2)
3. Press the power button - it may say 1052
4. Press the power button again.

The current room temp should now be correct.

To set the temperature of which you would like it to come on press the + and - as desired.

For example if you set it at 17 degrees the unit will activate at 16.5 degrees and lower and allow heat until 17 degrees is reached.

Technical Data
Output Voltage: 230V /50HZ
Switching Capacity: 3000W/ 13A
Backup storage: EEPROM
Sensor Mode: Internal Sensor
Temperature settings: 5°C ~35°C, 0.5°C increments.
Accuracy: +/- 0.5°C (+/- 1°F).
Thermostat dimension: 70 mm x 41.5 mm x 140mm.
Colour: White
IP protection rating: 20
Certification: CE
